Insert these codes at the corresponding sections in your copy of the Google Colab notebook, as demonstrated in the video course. Make sure the codes look like in the example image below after you inserted them to your colab.

Base Model 1: (Alternative to Realism Engine that I used in the past)

```
!wget -O /content/Fooocus/models/checkpoints/epicrealismXL_vxiiCrystalclear.safetensors https://civitai.com/api/download/models/1920523
```

Base Mode 2:

```
!wget -O /content/Fooocus/models/checkpoints/lazymixRealAmateur_v40.safetensors https://civitai.com/api/download/models/300972
```

It should look like this. In one line, **with one space in between!!**
